

## SG6 SILVERGUARD PROXIMITY WAND

**The SilverGuard RFID Proximity Wand is constructed from stainless steel to provide unsurpassed durability for operation in harsh environments. It's incredibly easy to operate. By just pressing a button, it can rapidly read an RFID tag within its scan area without errors or physical contact. It can even read RFID tags embedded in concrete walls. The SilverGuard RFID Proximity Wand is very versatile — it can download data directly to a Printer, PC, Modem, or a Remote Mobile Collector.**

- Reads 125KHZ RFID proximity checkpoints of varying sizes
- Downloads via the Computer Transfer Station to produce a variety of management reports
- High tensile stainless steel housing (tamperproof, water and shock resistant)
- User replaceable, long life Lithium battery: 3 volts battery pack and low battery light indicator
- Capacity: 5000 reads in all formats
- Visual and audible confirmation
- Operating temperature: -30° to 80° Celsius
- Memory: 128K SRAM, Processor: DS5001@11MHZ
- Checkpoints can be embedded behind any non-metallic surface
- Suitable for all environments, including malls, corrections, border patrol, hospitals, etc.
